To the Commissioners of the Oregon Department of Fish and Wildlife,

I do not agree with your current course of action - delisting the gray wolf from Oregon Endangered Species protection. Although the recovery of wolves is a remarkable story of resilience in our state, they still face perilous threats to their full recovery. The role that this species will have in our future intact ecosystems is critical.

Please consider comments from Bark and other partnering organizations before recommending delisting for the gray wolf.

Thank you,

Courtney Romine-Mann

Subject: Keep Wolves Listed State-Wide

To the Commissioners of the Oregon Department of Fish and Wildlife,

I urge you to make your decision based on science - not politics and pressure from powerful allies.

Would someone with an objective viewpoint really find a population of approximately 80 wolves in this grand state of ours enough to warrant a drop in protection? Especially considering the amount of wolf killings in states that have already made such decisions.

I urge you to do what's right based on science, morality, and a healthy eco-system (that we all depend on).

Thank you,

John Herberg

To the Commissioners of the Oregon Department of Fish and Wildlife, I do not agree with your current course of action, delisting the gray wolf from Oregon Endangered Species protection. Although the recovery of wolves is a remarkable story of resilience in our state, they still face perilous threats to their full recovery. The role that this species will have in our future intact ecosystems is critical.

Please consider comments from Bark and other partnering organizations before recommending delisting for the gray wolf.

I am convinced that if you delist the gray wolf now, within a short time you will have to put them back on the endangered list. Please don't destroy all the progress they have made.

Thank you,

Jan Elliott

To the Commissioners of the Oregon Department of Fish and Wildlife,

I do not agree with the delisting of the gray wolf from Oregon Endangered Species protection. Although the recovery of wolves is a remarkable story of resilience in our state, they still face perilous threats to their full recovery. The niche that this species has in our recovering ecosystem is too important to risk. It is critical that we set aside fear when considering this case. Comparatively, the average human is much more likely to be hurt or killed by day to day activities, rather than a wolf. The local population of the wolf species is still very much in jeopardy.

Please consider comments from Bark and other partnering organizations before recommending delisting for the gray wolf.

Thank you,

Joni Stockdale "wildlife diversity supporter"

The role that this species will have in our future intact ecosystems is critical.

Simply because there is a small increase, does not mean that wolves are not still extremely threatened, and that it makes sense to delist them.

Please consider comments from Bark and other partnering organizations before recommending delisting for the gray wolf.

To the Commissioners of the Oregon Department of Fish and Wildlife, I do not agree with your current course of action, delisting the gray wolf from Oregon Endangered Species protection. Although the recovery of wolves is a remarkable story of resilience in our state, they still face perilous threats to their full recovery. The role that this species will have in our future intact ecosystems is critical.

Wolves suffer from a negative perception in the eyes of much of the public and are universally vilified by farmers and ranchers. My opinion is that ranchers who are grazing their livestock on federal lands are guests of the public and should not be given a special status outranking other interested parties or stakeholders.

Further your own criteria for delisting does not appear to have been met. Wolves are active on a tiny fraction of their original range in Oregon. To me that implies that they are in fact "populations ARE undergoing imminent or active deterioration of range". Further wolves have been murdered and will no doubt continue to be murdered by forest users clinging to the myth of the dangerous wolf.

This apex predator is crucial for healthy forest ecosystems. Please consider comments from Bark and other partnering organizations before recommending delisting for the gray wolf.

Subject: Keep Wolves Listed State-Wide

To the Commissioners of the Oregon Department of Fish and Wildlife, I do not agree with removing the gray wolf from Oregon Endangered Species protection. The amount of space required by a single wolf pack is enormous. Their habitat is constantly threatened by encroaching human activity. This is not a trend that will be reversed in the near future. The role that this species will have in our future intact ecosystems is critical.

Please consider comments from Bark and other partnering organizations before recommending de-listing for the gray wolf.

From: Beth Katte <bethkatte@yahoo.com>
Sent: Wednesday, November 04, 2015 6:29 PM
To: odfw.commission@state.or.us
Subject: ODFW: Please consider keeping Oregon wolves listed

Dear Oregon Department of Fish and Wildlife Commissioners:

I'm writing the Commission today to request that the ODFW Commission keeps gray wolves listed on Oregon's Endangered Species List.

The wolf delisting proposal is purely political; the recommendation appears to not consider any scientific data collected from independent biologists (who do not agree with the delisting proposal).

Oregon's fragile population of a mere 81 wolves cannot currently withstand delisting. It would be disastrous to prematurely yank gray wolves off Oregon's Endangered Species List.

I'm urging the Commission to conduct a solid, peer-reviewed scientific analysis on the gray wolf population in Oregon before it makes its final decision on the gray wolf delisting. Until such thorough analysis is provided, I'm asking the Oregon Department of Fish and Wildlife Commissioners to keep Oregon wolves protected.

Thank you for considering my heartfelt request.

Sincerely,

Beth C. Katte
Los Angeles, California

Roxann B Borisch

From: Michele Shapiro <mshapiro1022arts@gmail.com>
Sent: Monday, November 02, 2015 2:28 PM
To: odfw.commission@state.or.us
Subject: Sound, Peer Reviewed Science Should Inform Wolf Decisions

While it takes time to build up a community it takes no time to eliminate it. The ranchers have had their day and it's time to let the wolves recover. I have been all over the state in areas where there "might" be wolves. I have only spotted them once. There can't be too many wolves enough to start shooting and eliminating them. As soon as they are delisted they will be plundered. Even with protections they are poisoned and shot. NO DELISTING

I am writing to express my strong opposition to the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list. It appears that this recommendation was a forgone conclusion made with limited input from independent biologists. It is clearly based on politics, not science.

ODFW solicited feedback from the scientific community on its updated biological review. However, before this feedback could be analyzed (in fact, even the deadline to receive it), the agency announced its recommendation to delist gray wolves. It appears that ODFW never intended to analyze or incorporate any meaningful independent scientific review into its recommendation to the Commission.

Biologists analyzing ODFW's biological opinion on gray wolves have found many faults with its methodology and conclusion. In fact, 14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation.

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such a update is concluded. If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions.

Thank you for your consideration of this very important issue.

Subject: Sound, Peer Reviewed Science Should Inform Wolf Decisions

I am writing to express my strong opposition to the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list.

It's appalling that humans have such little respect for another species that they would strip it of protection, ultimately leading to its demise. What are we doing to this amazing creation known as our world?

Please reconsider. Do not actively work to deprive our world of something so vital -- the lives that were placed in it.

Thank you for your consideration of this very important issue.

Subject: Sound, Peer Reviewed Science Should Inform Wolf Decisions

I am writing to express my strong opposition to the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list. It appears that this recommendation was a forgone conclusion made with limited input from independent biologists. It is clearly based on politics, not science.

ODFW solicited feedback from the scientific community on its updated biological review. However, before this feedback could be analyzed (in fact, even the deadline to receive it), the agency announced its recommendation to delist gray wolves. It appears that ODFW never intended to analyze or incorporate any meaningful independent scientific review into its recommendation to the Commission.

Biologists analyzing ODFW's biological opinion on gray wolves have found many faults with its methodology and conclusion. In fact, 14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation.

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such an update is concluded. If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions. Stripping the wolf population of its federal protection wouldn't just hurt the wolves in Oregon. Since the massacre of early Yellowstone, it has shown that taking even one species from an ecosystem could cause things to fall apart. Your intentions may seem that they could help but deep down, you know you would end up doing more harm than good if you succeed in this misguided plan. Without wolves, deer population numbers would get out of hand, ravens wouldn't be able to clean up carcasses that could spread diseases. You need to really think before you act because wolves have been through so much in the past just to regain what was once their home and by listening to intolerant ignorant extremists, you're only going to cause more problems. If you remove protection from your state's wolves, the only thing you're going to accomplish is create open season on these animals and they don't deserve it. They aren't be to targets for crazed gun toting maniacs. You need to listen to the good open minded civilians who know what's right for Oregon's wildlife and how your consideration will only bring suffering. States like Idaho and Montana are filled with the practice of brutal wolf killing which extends to even entire packs being slaughtered. Oregon's wolves shouldn't suffer because of our ignorance. When people think of what is the most dangerous predator, you would know it's us. This proposal is one that no one, not even the President would tolerate.

Thank you for your consideration of this very important issue.

If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions.

They keep killing wolves and your ecosystem will be destroyed. My grade 2 class has figured this out! If they can't, may I suggest the children's book Wolf Island?

Thank you for your consideration of this very important issue.

Subject: Sound, Peer Reviewed Science Should Inform Wolf Decisions

THIS IS IMPORTANT TO EVERYONE, NOT JUST IN OREGON BUT EVERYWHERE!

I am writing to express my strong opposition to the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list. It appears that this recommendation was a forgone conclusion made with limited input from independent biologists. It is clearly based on politics, not science.

ODFW solicited feedback from the scientific community on its updated biological review. However, before this feedback could be analyzed (in fact, even the deadline to receive it), the agency announced its recommendation to delist gray wolves. It appears that ODFW never intended to analyze or incorporate any meaningful independent scientific review into its recommendation to the Commission.

Biologists analyzing ODFW's biological opinion on gray wolves have found many faults with its methodology and conclusion. In fact, 14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation.

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such an update is concluded. If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions.

Thank you for your consideration of this very important issue.

Subject: Sound, Peer Reviewed Science Should Inform Wolf Decisions

I am writing to express my strong opposition to the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list. It appears that this recommendation was a forgone conclusion made with limited input from independent biologists. It is clearly based on politics, not science.

ODFW solicited feedback from the scientific community on its updated biological review. However, before this feedback could be analyzed (in fact, even the deadline to receive it), the agency announced its recommendation to delist gray wolves. It appears that ODFW never intended to analyze or incorporate any meaningful independent scientific review into its recommendation to the Commission.

Biologists analyzing ODFW's biological opinion on gray wolves have found many faults with its methodology and conclusion. In fact, 14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation.

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such an update is concluded. If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions.

Please remember that part for your responsibilities as a Public Board is to promote HEALTHY populations of all wildlife species and not just MINIMUM populations that could mean 'border-line' survival.

Thank you for your consideration of this very important issue.

I am a license wildlife rehabilitator in Bend, Oregon. I raise orphaned wildlife with the intention of setting them free into nature's food chain. The thought of my "babies" being killed by a predator really messes with my mind but what you propose to do is beyond wrong! Human beings have enough to do in an attempt to care for and control other human beings. Human beings do not belong in the business of controlling nature's perfect balance.

If human beings (ODFW) would shift our thought process and consider the real reasons one species might be suffering or thriving (out of nature's balance), the honest conclusion will always be human intervention. Human behavior needs to be changed, not the behavior of the animals.

It is wrong for the Oregon Department of Fish and Wildlife to recommend removing gray wolves from the state endangered species list. Why weren't the independent biologists consulted about this? Did you make this decision for political reasons? What scientific research led to this decision?

ODFW asked for feedback from the scientific community on its updated biological review. Then, before the scientific information could be analyzed, ODFW announced its recommendation to delist gray wolves. The fact is, ODFW never intended to consider the scientific information!

The biologists have found many faults with the ODFW methodology and conclusion. In fact, 14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation. **SO WHAT IS THE REAL REASON?**

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such an update is concluded. **AND:** the public should have a chance to weigh in on an informed decision. If ODFW is basing its delisting recommendation on political pressure rather than sound science, we need to question how legitimate ODFW is.

Thank you for your consideration of this very important issue. Please respond to me so I know someone is reading this letter.

As a wildlife conservationist who cares about healthy ecosystems. Please see "How Wolves Change Rivers" by George Monbiot <https://www.youtube.com/watch?v=ysa5OBhXz-Q>
I am writing to express my strong opposition and total dismay at the Oregon Department of Fish and Wildlife (ODFW) staff recommendation to remove gray wolves from the state endangered species list. It appears that this recommendation was a forgone conclusion made with limited input from independent biologists. It is clearly based on politics, not science. This is a common theme which I experienced during a campaign to save some local lakes in the UK which we ultimately did due to public opinion.

ODFW solicited feedback from the scientific community on its updated biological review. However, before this feedback could be analyzed (in fact, even the deadline to receive it), the agency announced its recommendation to delist gray wolves. It appears that ODFW never intended to analyze or incorporate any meaningful independent scientific review into its recommendation to the Commission.

14 prominent biologists have written to the Commission opposing gray wolf delisting from the state endangered species act. These independent biologists have said it is not only premature but also that ODFW's own science undermines its recommendation. This is entirely right and they should be heeded.

I urge the Commission to instruct ODFW to pursue an independent and meaningful scientific review of its report, and incorporate those findings into an updated recommendation. Any vote on whether wolves should be removed from the state endangered species list should be postponed until such a update is concluded. If the agency is basing its delisting recommendation on political pressure rather than sound, peer reviewed science, it undermines the legitimacy of the agency and its wildlife management decisions.

Thank you for your consideration of this very important issue.
