

## **Report on Assessment of Naturally Produced Summer Steelhead in the Umpqua River Basin Listening Survey and Workshop Report**

This attachment includes the Appendices 1-4 as follows:

- (1) Workshop Summary
- (2) A summary of the findings from the Listening Survey about participants' preferred management actions
- (3) Dr. Megan Jones' slides from the April 7<sup>th</sup> webinar, which include high-level findings from the workshop and the listening survey, and
- (4) The 105-page Qualtrics report, which has some formatting issues, but which includes all the qualitative data

Disclaimer regarding results from stakeholder input on North Umpqua summer steelhead:

Participants in the survey and workshop were not selected randomly. ODFW informed the public via a press release, with information about the survey and workshop, to 183 state news outlets and via social media in mid-March, reaching individuals who were already paying attention to this issue and/or ODFW communication channels. This means we likely didn't hear from:

- Disengaged audiences, people who may be affected but who don't know very much about the issue or who don't have a strong opinion
- People who aren't paying attention to existing communication channels
- People who for whatever reason couldn't participate in the time window
