Hello Commission

I am Logan DeGree A local guide here in Roseburg Oregon. I am running the online version of the petition and I wanted to present you guys all the 2,863 online signatures not to mention we have in person ones set up...Overall we have about 3,000.... I hope you guys look at this and take the time to see all the people that are unhappy with what's going on and hope we can continue the hatchery summer steelhead program with no changes.

Thank You

KINGSLEY Lisa M * ODFW

Dear Commission:

This letter is a statement prepared on behalf of a number of recreational anglers and guides on the Umpqua system. It's come to our attention that you are considering a proposal to block the release of 78,000 North Umpqua hatchery summer steelhead. We oppose this proposal, for the reasons outlined below:

- 1) The groups backing this proposal state that removing hatchery fish from the system has had a positive impact on returns of wild fish the following year. This theory is not derived from any science-based research, but rather based on an anecdotal observation of one year of winter steelhead 30+ years ago (*or should this say this is based on anecdotal observations of eliminating hatchery influence on winter steelhead, an entirely different run with different life history, habitat, and environmental influences*)?. The releases of hatchery summer steelhead have declined significantly since their peak in the 1980's, when upwards of 400,000 hatchery smolt were released annually (*is this right?*). If hatchery fish were truly having a direct negative impact on wild populations, wild fish numbers would have been lowest in the 80's with a steady increase over time; this has not been the case. It's common knowledge that anadromous fish are at the mercy of numerous factors, from freshwater habitat conditions, weather, land use, ocean conditions, harvest, and climate to name a few. The decline of a run of summer steelhead cannot be pinned on hatchery influence alone.
- 2) This proposal is being pushed by special interest groups (including some individuals who aren't even anglers) that have always been anti-hatchery, despite wild fish numbers. They will still oppose the release of hatchery fish regardless of wild fish numbers.
- 3) The fishery provided by the release of hatchery fish benefits a wide variety of anglers, despite the claim that only the most skilled anglers fish for them. It's true that fewer anglers target summer steelhead than other fish, but this is more a product of lower hatchery releases and returns than lack of interest. Furthermore, the economic benefit to Douglas County extends beyond guide revenues to hotels, restaurants, and license and tag sales for ODFW.
- 4) The taxpayers of Oregon have already made the investment to raise these hatchery fish, and ODFW has the permit to release them in the river. They were not raised to go into a closed lake fishery; doing so would be a waste of the money and effort that has gone into raising them to this point.
- 5) Caving to special interest groups on a proposal like this is likely to be precedent-setting; this goes back to the anti-hatchery sentiment expressed above. It's summer steelhead this year, but it's not likely to stop until they've eliminated all hatchery releases on the North Umpqua.

We hope you will consider the opinions of the majority of customers on the Umpqua River as you weigh the decision of what to do with these fish. We understand the value of a healthy fishery on the Umpqua system better than anyone, and the decision you make will affect us all. The Umpqua is not just a fishery for elitist wild fish advocates and environmental groups; it's for all of us.

Thank-you for your consideration,

KINGSLEY Lisa M * ODFW

To: COMMISSION ODFW * ODFW
Subject: Speak up for wild Summer Steelhead of the North Umpqua River

Dear Chair Wahl and Commissioners,

I ask the commission and department to revive wild Summer Steelhead abundance on the iconic North Umpqua River.

Since 1946, an average of 3,411 wild Summer Steelhead have returned to spawn in the North Umpqua River. Last year, through November 20, 2021, a mere 455 wild Summer Steelhead made it back to their natal waters of the North Umpqua River. This decline is not new, but the severity is. Status quo management has failed this population. It's critical that changes are made, especially given the added stressors on the ecosystem from catastrophic wildfire and our changing climate.

Additionally, ODFW should enforce its conservation plan to control hatchery risks to North Umpqua summer steelhead. The best available science shows that hatchery fish that spawn in the wild are detrimental to wild populations. The Native Fish Conservation Policy requires the department to manage so that no more than 10% of the fish spawning in the wild are hatchery fish until a conservation management plan is adopted for the watershed. In 2014, ODFW Commission adopted a conservation management plan for the North Umpqua River (Coastal Multi-Species Conservation Management plan, aka CMP) which states that no more than 10% of the fish spawning in the wild should be hatchery fish. Even with this guiding management standard, 33% of the fish spawning in the North Umpqua River over the last nine years have been hatchery fish. This greatly exceeds the limits set by ODFW in their own conservation management plan for the North Umpqua River. Since the catastrophic Archie Creek Fire, no smolts have been released into the North Umpqua Watershed, putting us on track for two consecutive years without hatchery fish released into the wild. We are well on our way to reducing the impacts of hatchery fish on the wild populations and meeting the goals established under the CMP.

The following are actions I encourage the commission to take that can set wild Summer Steelhead back on the path to abundance:

~Do not release 2022 smolts into the North Umpqua River - Not releasing hatchery fish this spring will put the North Umpqua River two years ahead for no hatchery releases.

~Use North Umpqua River-bound smolts to create alternate fishing opportunity - We encourage the commission to direct the department to release the 2022 hatchery Summer Steelhead smolts in a local reservoir to generate angling opportunity and economic stimulus for a lake or stillwater fishery that lacks the ability for anadromy.

~Pause the release of hatchery Summer Steelhead until ODFW can reduce the average number of hatchery fish spawning in the wild to meet their conservation management plan targets that keep hatchery spawning below 10% and ensure that the wild population is trending toward the desired abundance target.

I encourage the commission to make these impactful adaptive management changes immediately. ODFW must adhere to its own conservation management rules. Time is of the essence if we are to stem the tide of decline and revive wild Summer Steelhead to abundance on the North Umpqua River.

Sincerely,

Robert Zabrowski

Dear Chair Wahl and Commissioners,

I ask the commission and department to revive wild Summer Steelhead abundance on the iconic North Umpqua River.

Of all the salmon and steelhead species, Summer Steelhead depend on high quality local genetics to manage their run timing, jumping ability, and other survival traits. These fish use some of the most critically impaired waters that are the most threatened by Climate Change and require the ability to adapt without the injection of non-native genetics.

Since 1946, an average of 3,411 wild Summer Steelhead have returned to spawn in the North Umpqua River. Last year, through November 20, 2021, a mere 455 wild Summer Steelhead made it back to their natal waters of the North Umpqua River. This decline is not new, but the severity is. Status quo management has failed this population. It's critical that changes are made, especially given the added stressors on the ecosystem from catastrophic wildfire and our changing climate.

Additionally, ODFW should enforce its conservation plan to control hatchery risks to North Umpqua summer steelhead. The best available science shows that hatchery fish that spawn in the wild are detrimental to wild populations. The Native Fish Conservation Policy requires the department to manage so that no more than 10% of the fish spawning in the wild are hatchery fish until a conservation management plan is adopted for the watershed. In 2014, ODFW Commission adopted a conservation management plan for the North Umpqua River (Coastal Multi-Species Conservation Management plan, aka CMP) which states that no more than 10% of the fish spawning in the wild should be hatchery fish. Even with this guiding management standard, 33% of the fish spawning in the North Umpqua River over the last nine years have been hatchery fish. This greatly exceeds the limits set by ODFW in their own conservation management plan for the North Umpqua River. Since the catastrophic Archie Creek Fire, no smolts have been released into the North Umpqua Watershed, putting us on track for two consecutive years without hatchery fish released into the wild. We are well on our way to reducing the impacts of hatchery fish on the wild populations and meeting the goals established under the CMP.

The following are actions I encourage the commission to take that can set wild Summer Steelhead back on the path to abundance:

~Do not release 2022 smolts into the North Umpqua River - Not releasing hatchery fish this spring will put the North Umpqua River two years ahead for no hatchery releases.

~Use North Umpqua River-bound smolts to create alternate fishing opportunity - We encourage the commission to direct the department to release the 2022 hatchery Summer Steelhead smolts in a local reservoir to generate angling opportunity and economic stimulus for a lake or stillwater fishery that lacks the ability for anadromy.

~Pause the release of hatchery Summer Steelhead until ODFW can reduce the average number of hatchery fish spawning in the wild to meet their conservation management plan targets that keep hatchery spawning below 10% and ensure that the wild population is trending toward the desired abundance target.

I encourage the commission to make these impactful adaptive management changes immediately. ODFW must adhere to its own conservation management rules. Time is of the essence if we are to stem the tide of decline and revive wild Summer Steelhead to abundance on the North Umpqua River.

Sincerely,
Brice Crayne

Dear Chair Wahl and Commissioners,

Please - I ask the commission and department to revive wild Summer Steelhead abundance on the iconic North Umpqua River and Frank Moore's home water.

Since 1946, an average of 3,411 wild summer steelhead have returned to spawn in the North Umpqua River. Last year, through September 15th, 2021, a mere 347 wild summer steelhead made it back to their natal waters of the North Umpqua River. This decline is not new, but the severity is. Status quo management has failed this population. It's critical that changes are made, especially given the added stressors on the ecosystem from catastrophic wildfire and our changing climate.

The following are actions I encourage the commission to take that can set wild Summer Steelhead back on the path to abundance:

~Do not release 2022 smolts rearing at Cole Rivers Hatchery into the North Umpqua River - As recently reported in the Medford Mail Tribune, heaters at Cole Rivers Hatchery have malfunctioned and fish are unlikely to meet ODFW size standards for release. The best available science shows that juvenile steelhead that do not grow to size will often fail to travel to the ocean; rather the fish have a high likelihood of staying in the waters they were released in and spawning with wild fish. It is critical ODFW not release summer steelhead smolts this year.

~Use North Umpqua River-bound smolts to create alternate fishing opportunity - In early March of 2022, ODFW will spend valuable funds transporting juvenile hatchery steelhead from Cole Rivers Hatchery to either Rock Creek Acclimation site or another water body. We encourage you to direct the department to release these fish in a local reservoir to generate angling opportunity and economic stimulus for a lake or stillwater fishery that lacks the ability for anadromy.

~Pause the release of hatchery summer steelhead until ODFW can reduce the average number of hatchery fish spawning in the wild to meet their conservation management plan - The best available science shows that hatchery fish that spawn in the wild are detrimental to wild populations. The Native Fish Conservation Policy requires the department to manage so that no more than 10% of the fish spawning in the wild are hatchery fish until a conservation management plan is adopted for the watershed. In 2014, ODFW Commission adopted a conservation management plan for the North Umpqua River (Coastal Multi-Species Conservation Management plan, aka CMP) which states that no more than 10% of the fish spawning in the wild should be hatchery fish. Even with this guiding management standard, 33% of the fish spawning in the North Umpqua River over the last nine years have been hatchery fish. This greatly exceeds the limits set by ODFW in their own conservation management plan for the North Umpqua River. Since the catastrophic Archie Creek Fire, no smolts have been released into the North Umpqua Watershed, putting us on track for two consecutive years without hatchery fish released into the wild. We are well on our way to reducing the impacts of hatchery fish on the wild populations and meeting the goals established under the CMP.

I encourage the commission to make these impactful adaptive management changes immediately. ODFW must adhere

to their own conservation management rules. Time is of the essence if we are to stem the tide of decline and revive wild Summer Steelhead to abundance on the North Umpqua River.

Sincerely,
Jim Pruett

Dear Chair Wahl and Commissioners,

Stand up and show some courage for wild fish who don't have a voice! We need an ODFW that has courage in the face of financial gain and in the face of commercial and sport fisher interests. We've all had enough. Do you want the blood on your hands and to go down as a key constituents that allowed wild fish to perish statewide? Wake up!!!!!!!!!!

I ask the commission and department to revive wild Summer Steelhead abundance on the iconic North Umpqua River.

Since 1946, an average of 3,411 wild Summer Steelhead have returned to spawn in the North Umpqua River. Last year, through November 20, 2021, a mere 455 wild Summer Steelhead made it back to their natal waters of the North Umpqua River. This decline is not new, but the severity is.
