

Snake Sockeye SMU

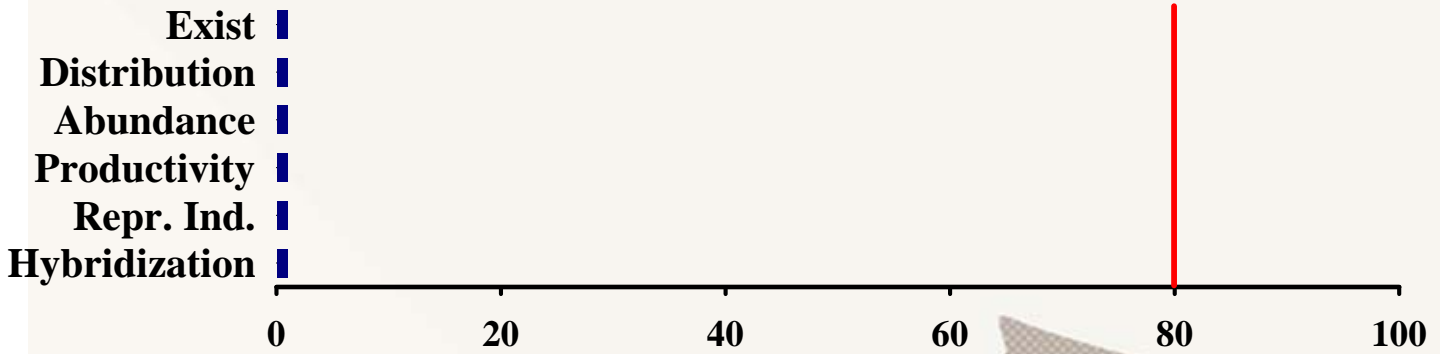

ESA Designation:
No Designation

State Status:
No Status

Interim Assessment:
Extinct

This SMU is extinct. A population historically existed in Wallowa Lake and its tributaries in the Wallowa Basin in Northeast Oregon. The construction of a barrier at the lake outlet in 1916 blocked anadromous passage. Sockeye were observed in Wallowa River below the lake until the early 1930s when they became extinct. Two resident kokanee populations persist in Wallowa Lake today, spawning in the inlet and on shore.

Percent of Populations Meeting Criteria

| Population | Exist | Dist. | Abund. | Prod. | Ind. | Hybrid |
|------------|-------------|-------|---------------------------|-------|------|--------|
| Wallowa | <i>Fail</i> | | <i>Extinct Population</i> | | | |
