---

## Compact Action

The Columbia River Compact agencies of Oregon and Washington met today and took the following actions:

### Non-Indian Fisheries

#### ***Commercial Mainstem Winter Salmon Fishery***

- Adopted a non-Indian commercial season as follows:

<b>Season:</b>	9 AM to 1 PM Tuesday April 14, 2009 (4 hours)
<b>Area:</b>	Zones 4 and 5. Hayden Island powerlines (west towers) upstream to the upper commercial fishing deadline at Beacon Rock.
<b>Sanctuaries:</b>	Sandy and Washougal River sanctuaries will be in effect.
<b>Gear:</b>	<b>Drift nets only. 4¼-inch maximum mesh</b> size restriction during tangle net fishery. Use of monofilament nets is prohibited. Net length not to exceed 150 fathoms. Net length can increase from 150 to 175 fathoms for tangle nets constructed with a optional steelhead excluder. Legal excluding devices include a mesh panel hung between the cork line and the tangle net mesh. The excluder panel must be a minimum of 5 feet in depth and not exceed 10 feet in depth with a 12-inch minimum mesh size. Monofilament mesh is allowed for the excluder panel. Use of weedlines or droppers, used in smelt bobber nets, are also legal excluding devices. Weedlines or droppers must extend a minimum of five feet above the tangle net mesh.
<b>Allowable Sales:</b>	Adipose fin-clipped Chinook salmon, white sturgeon measuring 43-54 inches in fork length, and shad.
<b>Participants:</b>	Columbia River commercial fishers with appropriate licenses and legal gear that have attended and completed the required state-sponsored workshop concerning live capture commercial fishing techniques.
<b>Multiple Net Rule:</b>	Nets not specifically authorized for use in this fishery may be onboard the vessel if properly stored. A properly stored net is defined as a net on a drum that is fully covered by a tarp (canvas or plastic) and bound with a minimum of ten revolutions of rope with a diameter of 3/8 (0.375) inches or greater. Other permanent gear regulations remain in effect.
<b>Miscellaneous Regulations:</b>	Owners or operators of commercial fishing vessels must cooperate with Department observers or observers collecting data for the Department, when notified by the observer of their intent to board the commercial vessel for observation and sampling during an open fishery.

Soak times, defined as time elapsed from when the first mesh enters the water to when the last mesh leaves the water, must not exceed 45 minutes. Lighted buoys are required at both ends of nets fished between sunset and sunrise unless the net is attached to the boat then one lighted buoy on the opposite end of the net is required.

Red corks are required at 25 fathom intervals and red corks must be in contrast to the corks used in the remainder of the net. Two red corks are required on each end of tangle nets constructed with a steelhead excluder panel, weedlines, or droppers.

Use of recovery boxes is required on all lethargic or bleeding steelhead and all lethargic or bleeding non-adipose fin-clipped salmon.

Each vessel participating in this fishery is required to have two operable recovery boxes or one box with two chambers. Operable recovery boxes require a flow of 16-20 gallons per minute to each chamber of the box(es). Each box must be operating during any time that the net is being retrieved or picked.

**24-hour Quick Reporting Rule in effect for Washington buyers.**

---

#### **FUTURE MEETINGS**

- There are no Columbia River Compact/Joint State hearings scheduled at this time.
- For information concerning these decisions see the April 13, 2009 Winter Fact Sheet #9.  
[http://www.dfw.state.or.us/fish/OSCRP/CRM/fact\\_sheets.asp](http://www.dfw.state.or.us/fish/OSCRP/CRM/fact_sheets.asp)
- Recorded Mainstem Commercial, Select Area Commercial, and Sport Fishery Updates and Action Notices can be accessed by calling (971) 673-6000 and following recorded instructions.
- Note: Joint Staff Reports, Fact Sheets, and Columbia River Action Notices are also available through the Internet at:
