Hi Greg-
Brian Bangs offered up the following in response to your request that USFWS review the fishes covered by the proposed OARs-
"Peamouth Chub (*Mylocheilus caurinus*), which has fluvial movement patterns (perhaps adfluvial in some places) during its spawning period. It utilizes similar spawning habitat as steelhead."

The only other species group that came up in my query to others was Cottidae spp.

USFWS is still working with Ben on lamprey items. More to come - Thanks-
ann
