**WELCOME TO HANCOCK FOREST MANAGEMENT, INC. and GREEN DIAMOND RESOURCE COMPANY LANDS**

We sincerely hope you enjoy your visit. We have a strong commitment to sound management of our natural resources, and to provide you with a quality recreational experience. Here are a few things you can do to help:

1. Leave a clean camp! Please don't pound nails into tree live trees. Pack out all garbage. If you must build a latrine, remove all building materials and cover the trench before you leave. Please don't leave a mess for someone else to deal with.

2. Drive safely! Remember, these roads have logging trucks on them, and a 40-ton truck can't maneuver as well as your vehicle. If possible, stay off the road during working hours, and don't block gates or roadways when parking your vehicle.

3. Don't cut down snags! Snags (standing dead trees) are a very important part of the habitat for non-game wildlife like woodpeckers and owls. We try to provide habitat for these species by leaving snags as a part of our forest management activities. Please don't cut down snags; there is plenty of wood on the ground that can be used for camp wood. Thanks, on behalf of our non-game friends.

4. Get that data! It is virtually impossible to manage game populations effectively without good biological data, and some data can only be collected with help from hunters like you. If you are a bird hunter, please put bird wings in one of the collection barrels. Big game hunters, please collect the middle incisor teeth (front teeth) from your animal; these will be used to understand the herd's age structure. If you have an antlerless tag, please collect teeth, the reproductive tract, udder, and kidneys with attached fat. The samples you collect will be used to monitor the herd's pregnancy rate. Stop by the field headquarters, or ask a biologist for collection bags and instructions for gathering these samples. We'll even do it for you.

Thanks again and have a nice trip.
