# Limit Elk Damage to Your Property

---

---

**E**lk follow their food, so taking away their food source – your lawn, favorite flowers and shrubs – will help send them

elsewhere. Here are a few ways to protect your landscaping.

## **Fencing**

The best elk deterrent is a seven-foot fence around your property.

## **Wrap ornamental plants with plastic netting**

This will keep elk from browsing on your plants.

## **Big Game Repellent**

Since fencing can be expensive to install, big game repellents may also be useful in reducing damage to your property.

Many repellents are environmentally friendly but water soluble so they need to be reapplied after significant rain. A variety of commercial products are available at garden shops, nurseries, florists and on the Internet. Examples include Deer Away, Plantskydd and Liquid Fence.

## **Motion-activated Sprinklers**

Motion-activated sprinklers aggressively spray water in short bursts when an animal walks into

the field of the sprinkler's electronic eye, scaring the animal away. They are most effective when moved around the yard periodically so approaching animals are kept off-guard.

Sprinklers such as the Scarecrow and Spray Away are available at garden shops and on Internet sites such as Amazon.com.

## **Deer and Elk-resistant Landscaping**

Take advantage of the many deer and elk-resistant plants available at local nurseries. There are a wide variety of ornamental shrubs, flowers, plants and trees that deer and elk find unpalatable. Ask your local nursery or check ODFW's Web site (see below) for a general guide to these plants.
